

GOING GREEN

OUR ONGOING ENVIRONMENTAL COMMITMENT

Our FLEET

- All vehicles are Euro 6 as a minimum offering the very best emissions possible for the vehicle type. They are all approved for LEZ usage and we are continually working with our suppliers to ensure we are at the forefront of environmentally friendly transport. We are currently investigating the usage of 100% electric vehicles within our fleet and different ways to cut down the number of vehicles we have on each job.

Our DEPOT

- We recycle 100% of the waste generated from our operations ensuring a zero to landfill policy. We are currently investing heavily in a custom designed water recycling system to manage all water used for cleaning our fleet and hire kit, even the dirtiest of equipment! We also ensure absolutely no contaminants from our cleaning processes are released back into nature. All fresh water returned unused from customers is put into our cleaning processes and not wasted.

Our HIRE EQUIPMENT

- All new equipment added to stock is reviewed for its sustainability. Many of the latest offerings are in fact driven with this as the main factor. Water machines to cut down single use plastic bottles on site, recycled plastic bar fronts to replace single use wooden sheets and 100% recycled plastic fence feet are just some of the examples.

Our SERVICE OFFERING

- We are constantly developing our service offerings with sustainability as the key objective. From launching a water delivery vehicle to cut road transport by 300% to offering a 100% Recycled alternative to diesel for use in our plant and equipment. We have even launched a 100% recycled waste service ensuring zero to landfill for all waste collected from our customers.
